

**The Student Rescue Project  
Foster Waiver**

**Name of Foster:**

**Date:**

By signing this document I understand that, as a volunteer foster for The Student Rescue Project, Inc. this dog will be my responsibility. Their health care, training, housing and general care will be my responsibility and I agree to make sure that all their needs are met. If the dog presents with health issues, I will let the directors at The Student Rescue Project know and/or call their veterinarian directly. Emergency veterinarian services are reserved ONLY for life-threatening situations. As a foster, we rely heavily on your opinion of the plans we have for your dog. If, for whatever reason, you do not believe your dog is ready for adoption OR that the adoptive family we have selected is not a good match you MUST tell us. You know your foster dog better than we do!

Fostering a rescued dog is a big commitment. The dog you're fostering for The Student Rescue Project, Inc. has likely been exposed to numerous transmissible parasites and, perhaps, zoonotic diseases. The Student Rescue Project has a very high standard of care that each dog is subject to before adoption and this protocol is designed to prevent and or treat these contagions. A 30-day period of isolation (informal protocol) is observed and each dog is treated with a standard protocol of deworming and oral preventatives for ticks, fleas and mites and vaccinations as advised by our veterinarians. Even with this protocol in place health issues can arise. We require that all dogs are placed on a 14-day home isolation period during foster before being introduced to public events and places (ie no parties, dog parks, adoption events, etc.). With this strategy, we are allowing the dog to rest and recover after transport and waiting to see if any unexpected health issues arise.

I hereby understand and acknowledge all the information stated above and that a breach of this contract could result in repossession of this dog by The Student Rescue Project, Inc.
